

FreePass- A Random and Replicable Password Manager

Computer Science Project 20/21

Android Mobile Application

- Overseen by Pedro Coutinho;
- Has the most basic but most important function implemented;
- Still need to implement customization options and a Login feature.

Password Generating Algorithm

- Overseen by João Morais;
- It is pretty much completed;
- We need to talk with our orienter to learn how we can improve security even more.

Chromium Browser Extension

- Overseen by Miguel Ferreira;
- It's still not fully functional;
- We believe it won't take long to have it working correctly.

The End

Do you have any questions/suggestions?

If not, let's proceed to the prototypes...
